MENTAL HEALTH CONDITIONS ARE IGNORED

LAWMAKERS WIDELY REJECT IT

Over the past two years, twenty-nine states have considered AS legislation. Only TWO passed the bill into law and one state legalized by ballot measure.¹

LETHAL ADDICTIVE DRUGS GO UNUSED

If a patient fills the lethal prescription — typically 100 pills — but decides against taking it, there are no safeguards to ensure the drugs stay out of the hands of children and prescription drug dealers. In Oregon, 468 people have filled their prescription and decided not to end their lives, leaving tens of thousands of highly addictive barbiturates unaccounted for.²,³

TAXPAYERS FOOT THE BILL

Taxpayers in Oregon and California pay for the lethal drugs and doctor visits. California’s Medicaid program has budgeted $2.3 million taxpayer dollars for the first fiscal year PAS is legal. President Bill Clinton prohibited using federal funds to subsidize PAS, leaving states to foot the bill.⁴

IT AFFECTS OVERALL SUICIDE RATES

Oregon legalized assisted suicide in 1997. Oregon’s overall suicide rate had been comparable to the national average, but such laws make suicide more socially acceptable. By 2007, Oregon’s suicide rate was 35% above the national average, and by 2010, it was 41% above. Just reading about AS can serve as a trigger for those contemplating suicide.⁵

MENTAL HEALTH CONDITIONS ARE IGNORED

Only 4% of patients who died from PAS in Washington state were referred for a mental health evaluation. Suicidal patients aren’t given resources they deserve, like being screened for depression by a mental health care provider.⁶

IT’S IMPERSONAL

These lethal drugs are often prescribed by physicians who barely know their patients. More than half of patients who died from the lethal drug in Washington state only knew their prescribing physician for six months or less.⁷

Serious Side Effects of Assisted Suicide Laws

Legalized assisted suicide is fatally flawed. It has dangerous and careless provisions making it bad public policy.

NO MENTAL HEALTH EVALUATION REQUIRED
There is no requirement that a patient receive a psychological evaluation before the life-ending prescription is written. A screening from a doctor untrained in mental health is not sufficient.

NO EDUCATION ON PROPER USE OR DISPOSAL
Pharmacists aren’t required to counsel patients on proper ingestion methods or disposal of the lethal barbiturates. If patients don’t use the drugs, they may dispose of them improperly, sending large amounts of barbiturates into the local drinking water supply.

NO DRUG TAKE-BACK PLAN
The same drugs being used in PAS now were once widely distributed on the black market and abused by prescription drug addicts in the 1970s. Barbiturates are highly addictive and can cause life-threatening withdrawal, coma or death. As the nation continues to fight prescription drug addiction, reintroducing large amounts of these drugs - with no controls in place to collect unused pills - will strain already depleted law enforcement and addiction treatment resources.

NO PROTECTION FROM GREEDY INSURANCE ABUSE
Managed care HMOs and greedy insurance companies can, have, and will deny coverage for expensive care prescribed by physicians and offer the ever-cheap “treatment” of assisted suicide.

NO WITNESS REQUIRED AT DEATH
The law requires two witnesses to be present at the patient’s request for the suicide, but none at the time of the suicide. Patients may be coerced into ingesting the drug, or another person may administer the drug, leaving serious potential for abuse.

NO WAY TO PREDICT AN ACCURATE PROGNOSIS
Patients can request PAS if diagnosed with a terminal illness and six months or less to live. But, medical prognoses are based on often-incorrect averages, and patients frequently outlive them.

NO SAFEGUARDS FOR PEOPLE WITH DISABILITIES
Leading national disability rights groups recognize the many dangers the bill poses to people with disabilities, including those with intellectual and developmental disabilities, falling prey to undue influence from doctors or family members, resulting in a lack of true informed consent.

NO FAMILY NOTIFICATION REQUIRED
The prescribing doctor must “recommend” that the patient inform family members of his or her intention, but nothing in the law requires it.

NO ID NECESSARY FOR PICKUP
Patients acquire their lethal drugs through a local pharmacy. Most states don’t require people to show ID at the time of pick-up and some allow delivery by an Uber driver, so virtually anyone can get up to 100 individual pills of secobarbital and pentobarbital, the drugs commonly used to administer the death penalty.

NO DOCTOR OR NURSE IS PRESENT
Typically, no doctor, nurse or independently licensed aid worker is present when the patient ingests the lethal dose. If something goes wrong, any physical or emotional complications must be handled solely by the patient and those witnessing the death.

WARNING: THESE ARE ONLY SOME OF THE FLAWS IN BILLS WHICH LEGALIZE ASSISTED SUICIDE
A broad coalition of stakeholders, including disability advocates, elder abuse lawyers, members of the medical community, patient advocates, and faith-based organizations, have joined together to fight this predatory policy, protect vulnerable citizens, and ensure that everyone has a compassionate end-of-life experience.
